Abstract

Definiteness expresses a constellation of semantic, pragmatic, and discourse properties (the communicative functions) of an NP. Our supervised classifier for English NPs uses lexical, morphological, and syntactic features to predict the communicative functions in terms of a language-universal classification scheme and establishes strong baselines for future work. Additionally, analysis of the features and learned parameters in the model provides insight into the grammaticalization of definiteness in English, not all of which is obvious a priori.

Classification Model

We use an in-house implementation of a multiclass logistic regression classifier [***AB: Do we want to say why we used log regression? something as follows:***] as the results are interpretable (logistic regression allows us to analyze the feature weights and hence generate hypotheses regarding form-function interactions). [***AB: will add or just replace with the weight times percept version of teh objective once am sure about it***].

$$\hat{\boldsymbol{\theta}} = \arg\max_{\boldsymbol{\theta}} -\lambda||\boldsymbol{\theta}||_2^2 + \sum_{\langle x,y\rangle \in \mathscr{D}} \log \frac{\exp \boldsymbol{\theta}^\top \mathbf{f}(x,y)}{\sum_{y' \in \mathscr{Y}} \exp\left(\boldsymbol{\theta}^\top \mathbf{f}(x,y')\right)}$$

Features

Words of Interest Head of the NP, its dependents, its governor (external to NP), its first ancestor verb
— token, lemma, POS tag, dependency relation, a binary indicator of plurality on the head N, first_dependent, last_dependent, auxiliaries of the first ancestral verb, first ancestral verb with a negative particle as dependent.

Structural — path length to the root, path length to the first ancestral verb, number of dependents, number of dependency relations that link non-neighbors.

Positional — token length of the NP, NP's location in the sentence (first or second half), the first ancestral verb's position relative to the head (left or right), POS & lemma of the left and the right neighbors of the head, governor, and the first ancestral verb.

Above features of NPs in Following NP-NP relation Types immediate parent, immediate child, immediate precedent, immediate successor, the nearest preceding coreferent mention.

Communicative Functions of Definiteness

Examples for Communicative Functions

CFD Label	Example
Unique_Physical_Copresence	**John** here is an investment banker.
Unique_Larger_Situation	In the days since **Hillary Clinton** unburdened herself in an interview with The Atlantic's Jeffrey Goldberg ...
Unique_Predicative_Identity	Clark Kent is **Superman**.
Unique_Hearer_New	a restaurant chain named **Shoney's**
Nonunique_Physical_Copresence	**The podium** is too high.
Nonunique_Larger_Situation	**the chair** (at a conference) / **today**
Nonunique_Predicative_Identity	He is **the manager**.
Nonunique_Hearer_New_Specific	I am looking for **a nurse**. Her name is Sara.
Nonunique_Nonspec	I am looking for **a nurse** [any nurse would do].
Generic_Kind_Level	**Dinosaurs** are extinct.
Generic_Individual_Level	**Cats** have fur.
Basic_Same_Head	I'm going to tell you a quick story. It's **a true story**.
Basic_Different_Head	I adopted a cat this weekend. **The animal** is so cute.
Extended_Bridging_Nominal	I looked at an apartment yesterday. **The kitchen** was really large.
Extended_Bridging_Event	My friend's son got married this weekend. **The bride** looked beautiful.
Extended_Bridging_Restrictive_Modifier	**the house** next door/ John's **daughter**
Extended_Subtype_Instance	I collect coins. I have **a 1943 steel penny**.
Extended_Other_Context	I want to focus on what many of you have said you would like me to elaborate on. What can you do about **the climate crisis**?
Pleonastic	**It is raining.**
Quantified	**All the people** / **no motorcade**
Predicative_Equative_Role	He's **a teacher**. / This is **an opportunity**.
Part_of_Noncompositional_MWE	Ole' Charlie kicked **the bucket** today.
Measure_Nonreferential	**hours** later / **miles** away
Other_Nonreferential	**global warming** / **concern** / the topic of **energy**

Accuracy

Condition	# Params	ExactMatch(%)	SoftMatch(%)
Majority baseline	—	12.1	47.8
Log

Analysis

Confirmation of known facts: Specificity

High +ve wts	High -ve wt
the definite article "the"	the indefinite article "a"
possessives (PRP$)	
proper nouns (NNP)	
2nd person pronouns	
NPs with "the" as the first dependent	

Good hypotheses to test: Specificity

High +ve wts	High -ve wt
objects of "from"	NPS with comparative adject
NPs with NNP as their last dependent	
NPs with possessive pronouns	
immediately preceding the	
head (rather than the	
ones with intervening words)	

Baffling cases: Specificity [***AB: to be added***]
